

# *Meteorological measurements in Reyðarfjörður 1998-2000*

*Pórður Arason*

*Flosi Hrafn Sigurðsson*

*Hreinn Hjartarson*

*Torfi Karl Antonsson*

*Veðurstofa Íslands*

*Icelandic Meteorological Office*

# Objectives

*Comprehensive meteorological measurements have been carried out in Reyðarfjörður to assess the danger of:*

- *Prolonged periods of calm or light winds.*
- *Multiple recirculation of polluted air in the fjord.*
- *Temperature inversions that act as a lid for dispersion of polluted air at some height in the fjord.*

# *Stations in Reyðarfjörður*

- *Kollaleira - manned station (1976- )*
- *Sómastaðagerði - Mjóeyri (1981-1985)*
- *Eyri - Leirur (1993-1995)*
- *Eskifjörður (1998- ), Gagnheiði (1993- )*
- *Oddskað (1995- ), Fagridalur (1996- ) (Vg, PRA)*
- *Seley (1996- ) (Siglingast, IMA)*
- *Sómastaðagerði (1998-04- )*
- *Vattarnes - Ljósá - Kollaleira (2000-06- )*

# *Kollaleira*

- *Manned climatic station (1976-1984)*
- *Manned synoptic station (old farm) (1984-1990)*
- *Manned synoptic station (new farm) (1990- )*
- *W-L Wind-recorder, 2m (1982- )*
- *Windspeed recorder, 10m (1998-10- )*
- *Automatic weather station (2000-06- )*

Eyri

1993-06 to 1994-09

Leirur (Sléttunes)  
1993-06 to 1995-10

# *Sómastaðagerði*

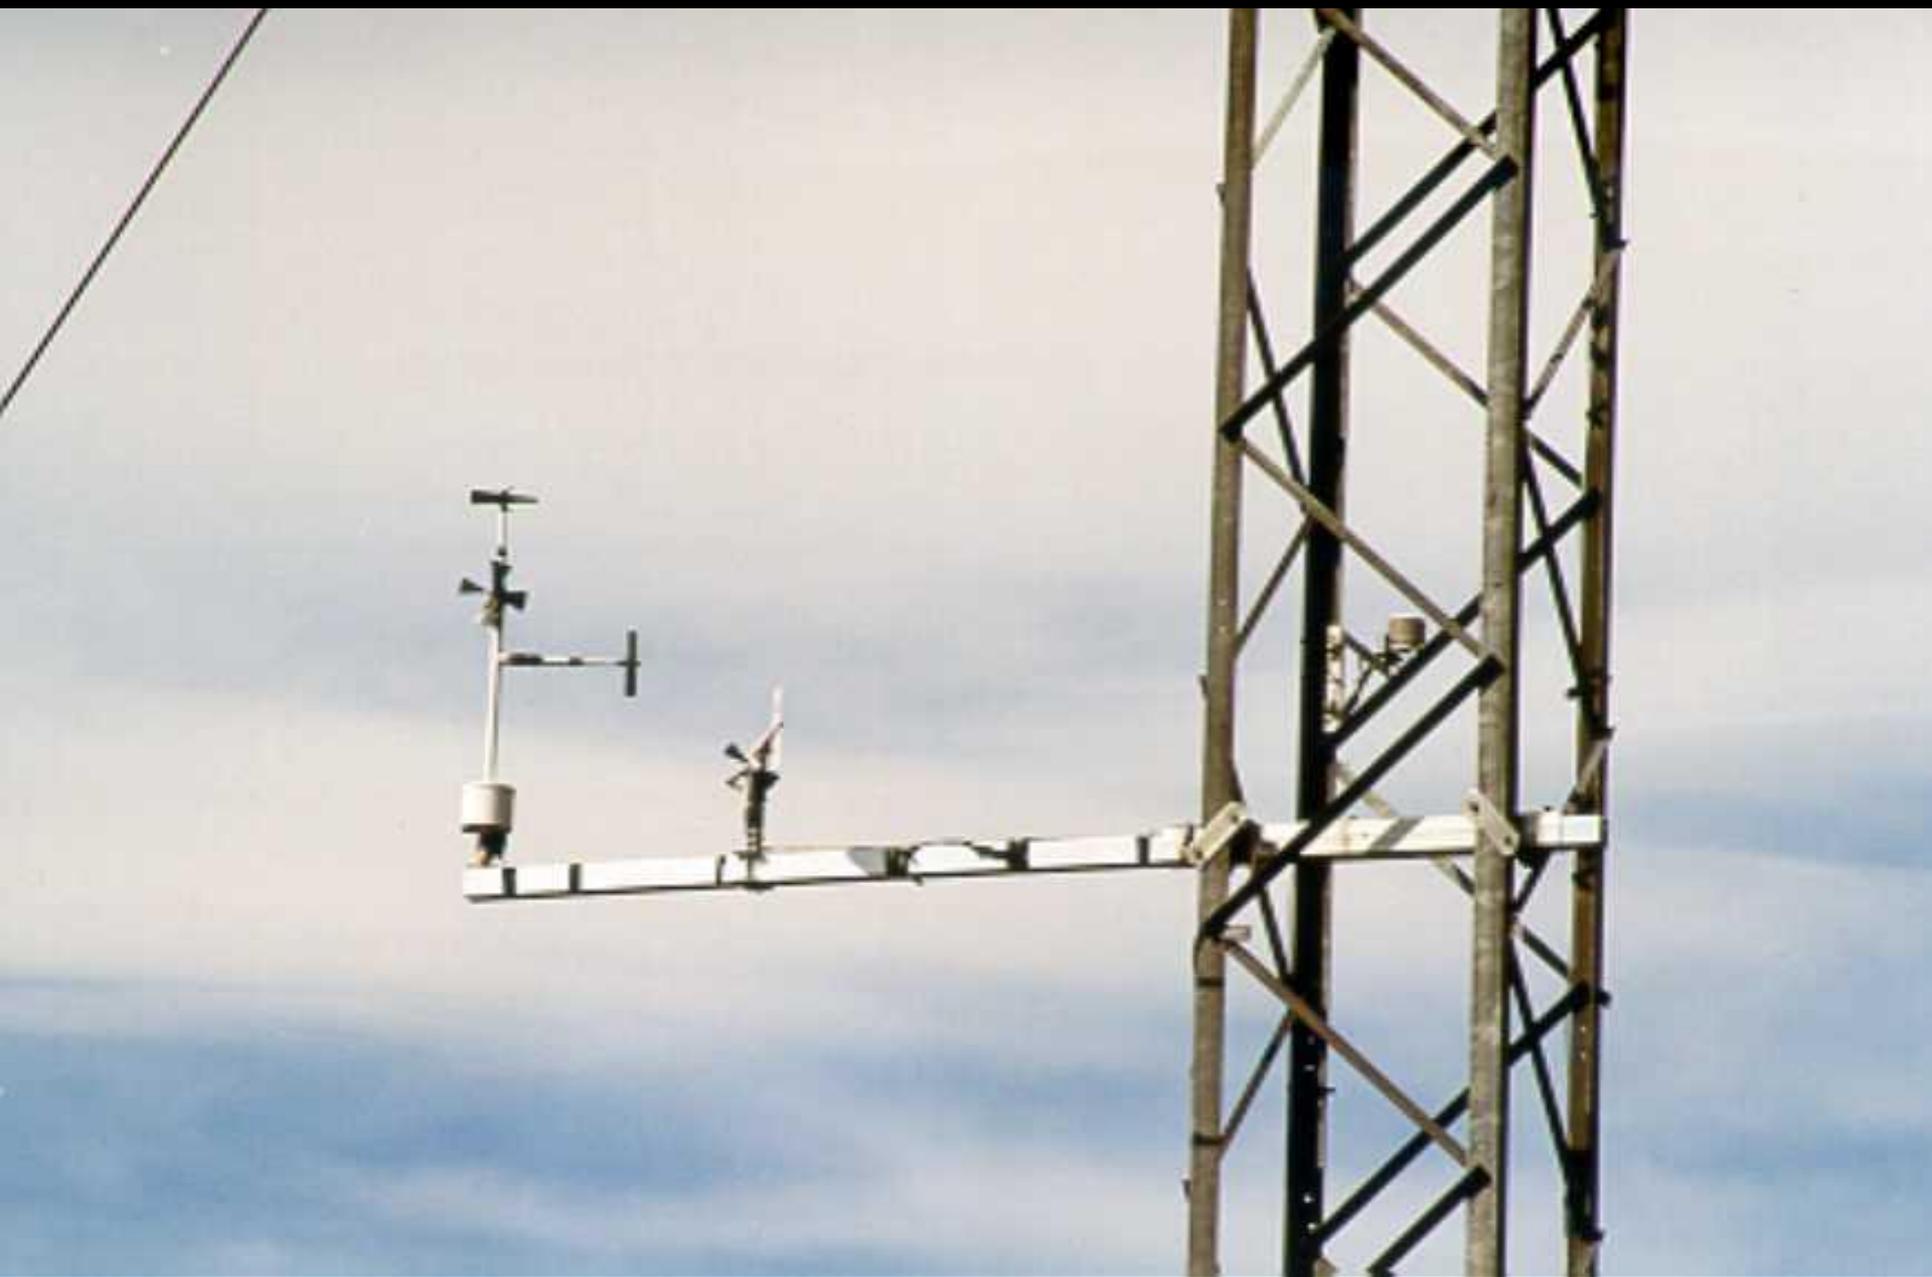

*Since 1998-04*

*Measurements in a 38 m mast recorded every 10 min*

- Air temperature at 3, 10, and 37m*
- Relative humidity at 3 m*
- Young windspeed, gust, direction and SD of direction at 10 m*
- 3D Gill windspeed and SD of windspeed at 10 and 37 m*

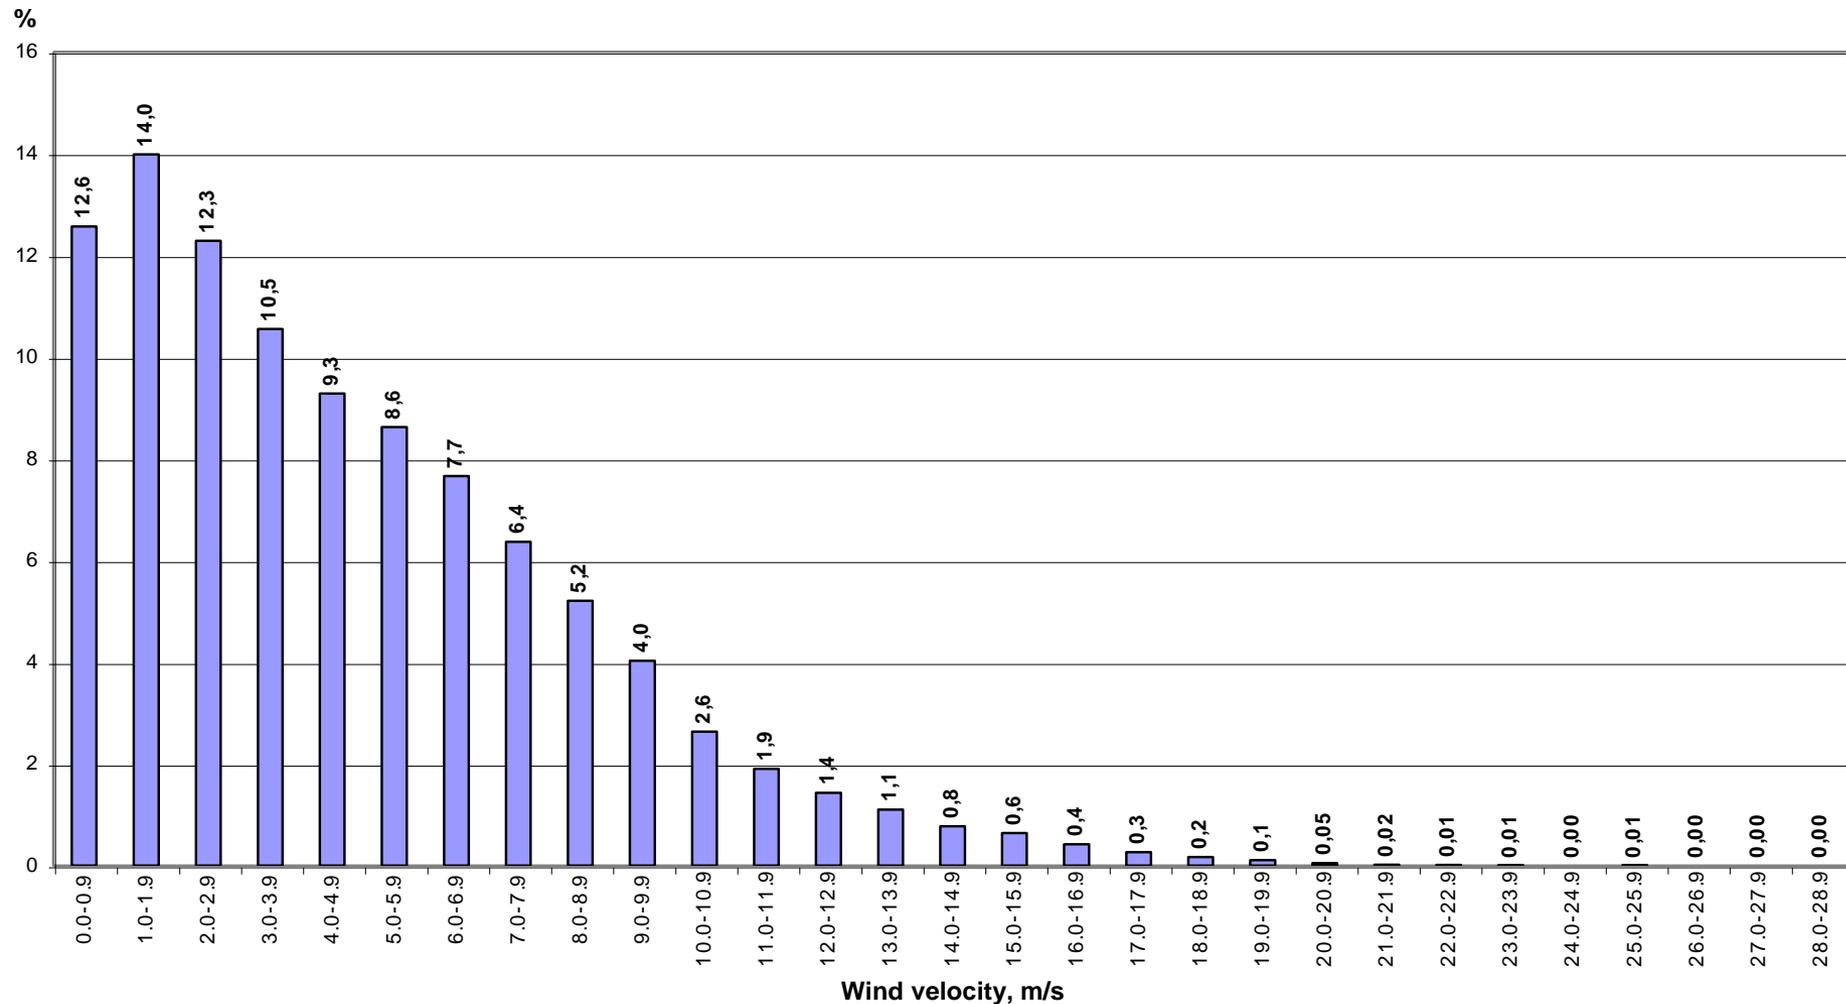

Sómastaðagerði 1998-04

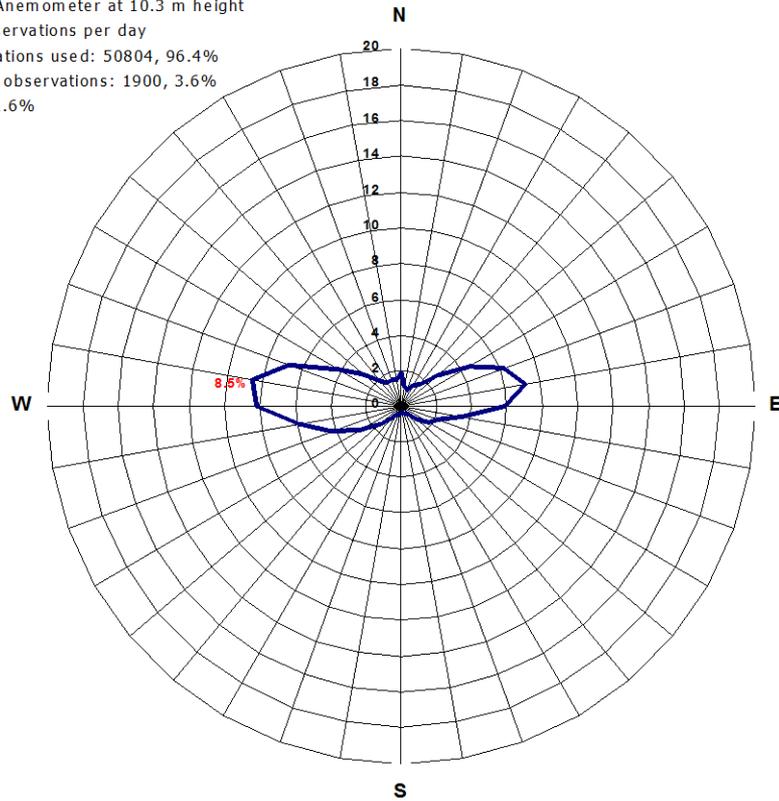

# Sómastaðagerði

*Wind speed distribution, May 1998 - April 1999*

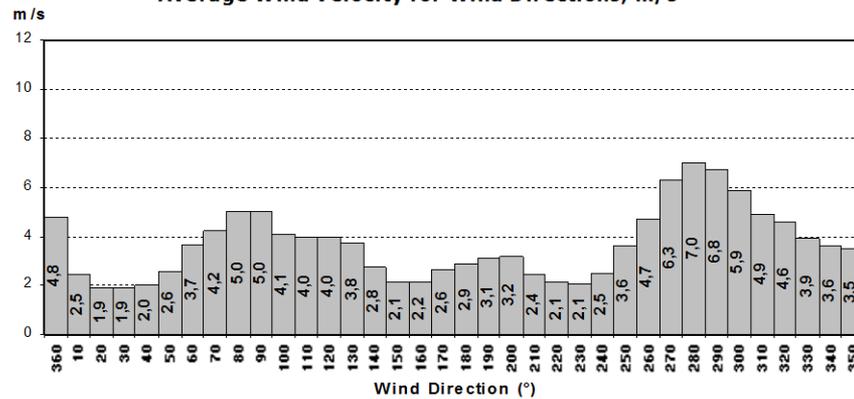

### Frequency of Wind Directions, % Year, May 1999 - April 2000

Young Anemometer at 10.3 m height  
 144 observations per day  
 Observations used: 50804, 96.4%  
 Missing observations: 1900, 3.6%  
 Calm: 2.6%

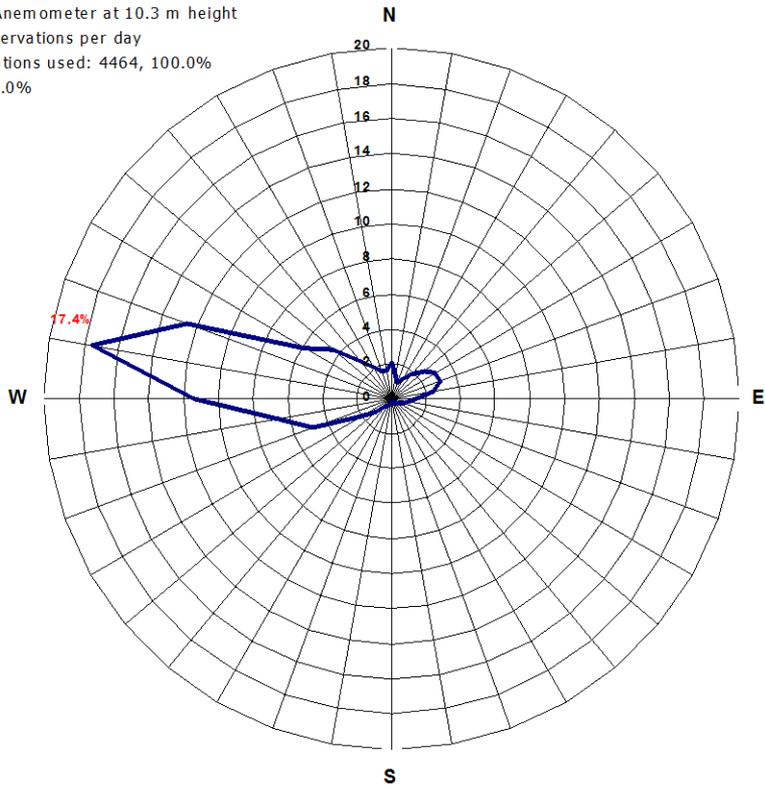

### Average Wind Velocity for Wind Directions, m/s

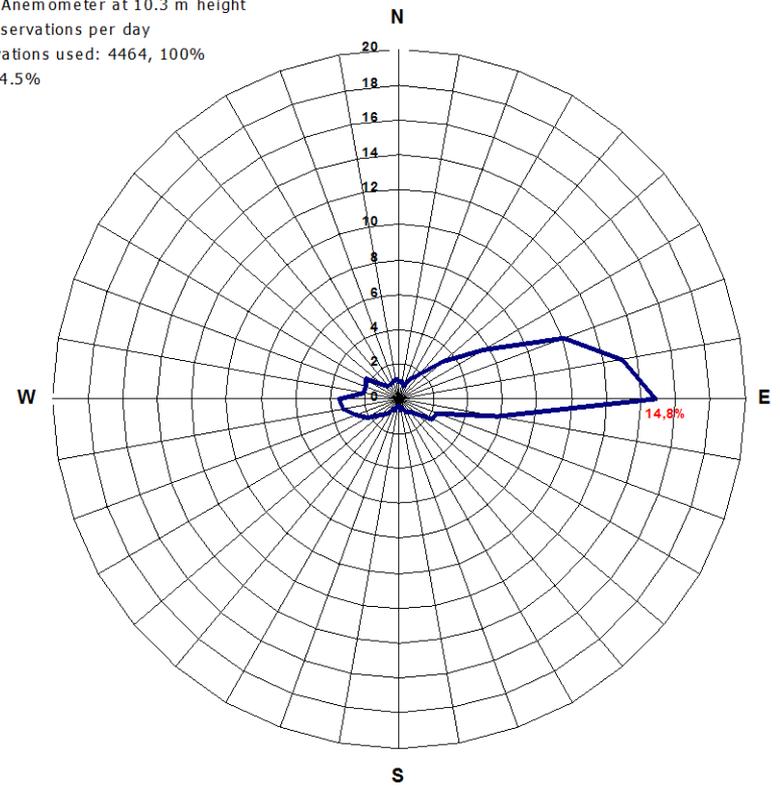

### Frequency of Wind Directions, % January 2000

Young Anemometer at 10.3 m height  
144 observations per day  
Observations used: 4464, 100.0%  
Calm: 1.0%

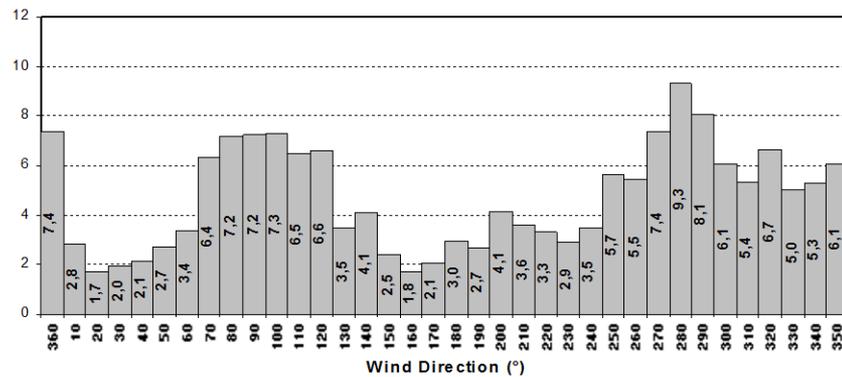

### Frequency of Wind Directions, % July 2000

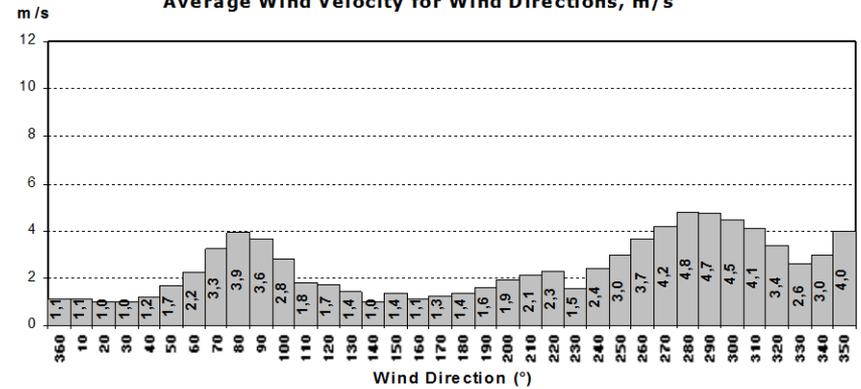

Young Anemometer at 10.3 m height  
144 observations per day  
Observations used: 4464, 100%  
Calm: 4.5%

### Average Wind Velocity for Wind Directions, m/s

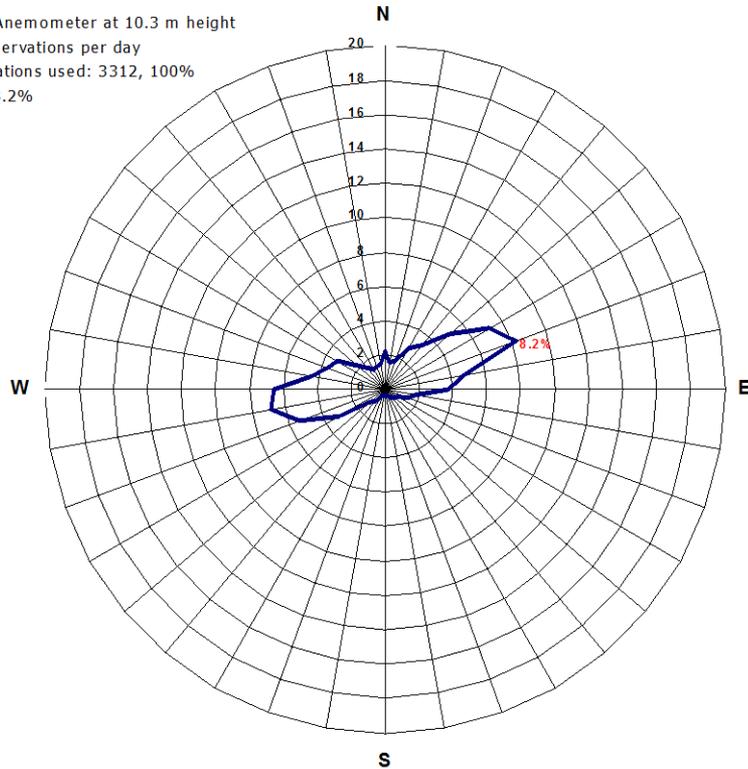

### Average Wind Velocity for Wind Directions, m/s

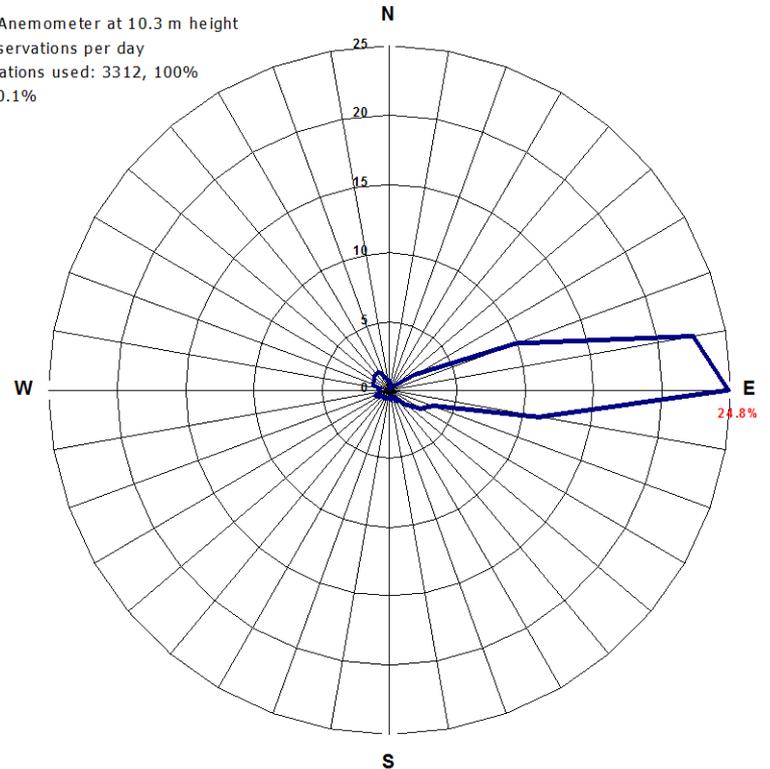

### Frequency of Wind Directions, % High Summer, June - August 2000, Night Hours 00 - 06 GMT

Young Anemometer at 10.3 m height  
144 observations per day  
Observations used: 3312, 100%  
Calm: 8.2%

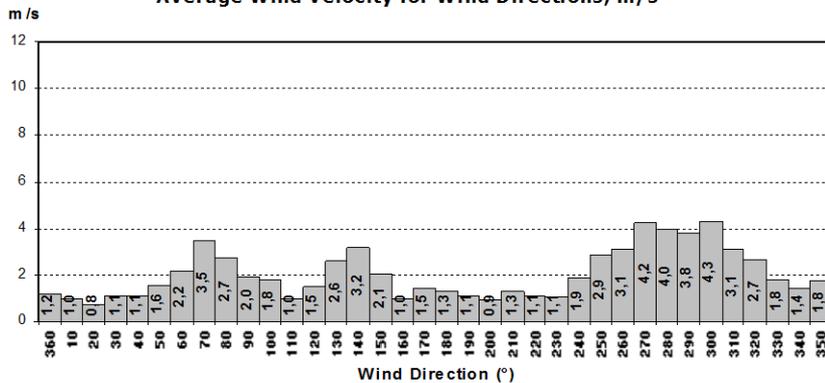

### Frequency of Wind Directions, % High Summer, June - August 2000, Day Hours 12 - 18 GMT

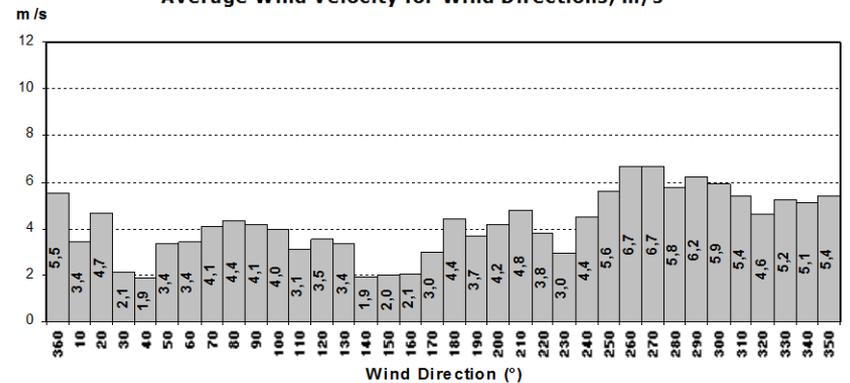

Young Anemometer at 10.3 m height  
144 observations per day  
Observations used: 3312, 100%  
Calm: 0.1%

### Average Wind Velocity for Wind Directions, m/s

### Average Wind Velocity for Wind Directions, m/s

# *Sea and land breeze*

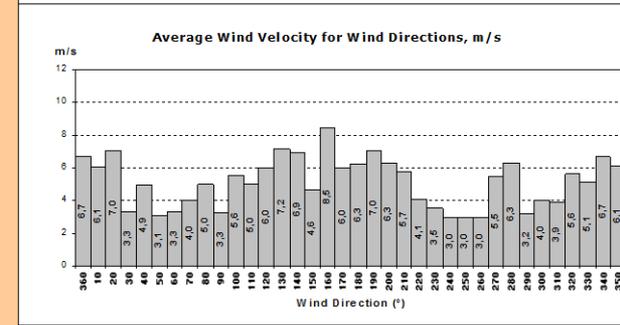

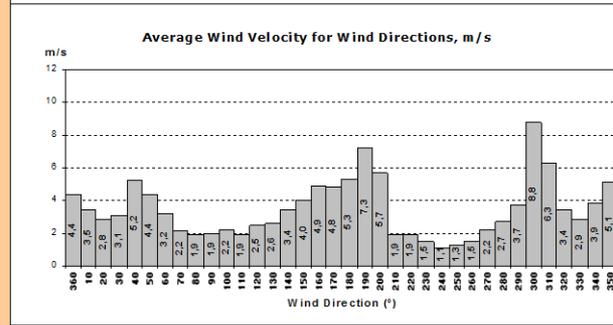

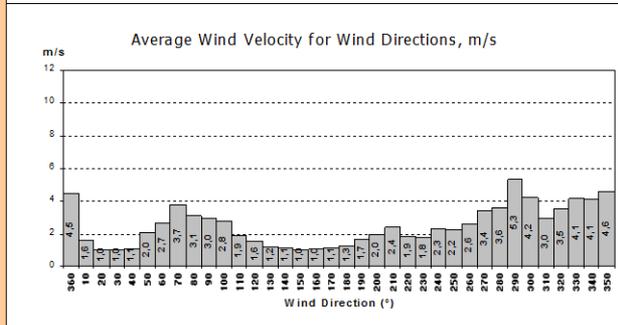

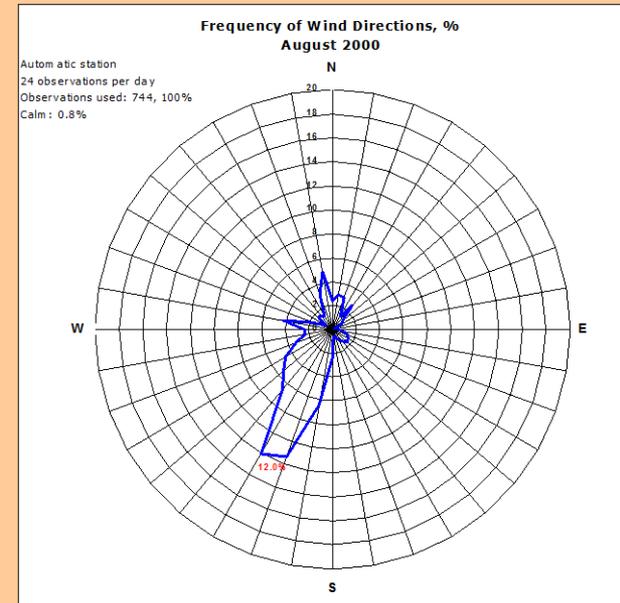

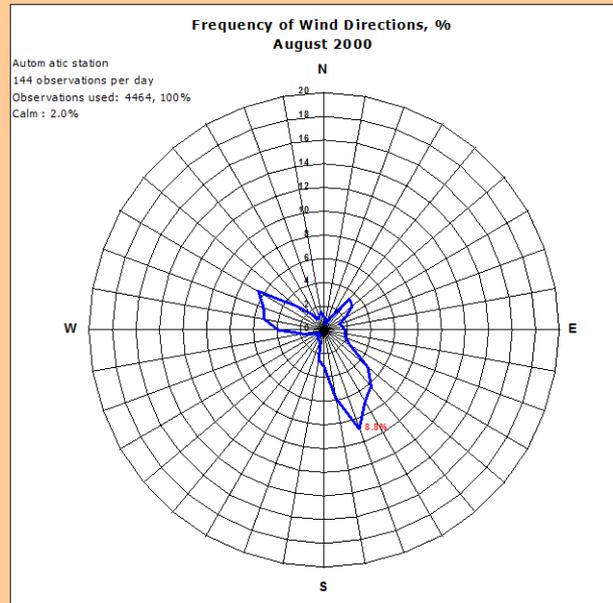

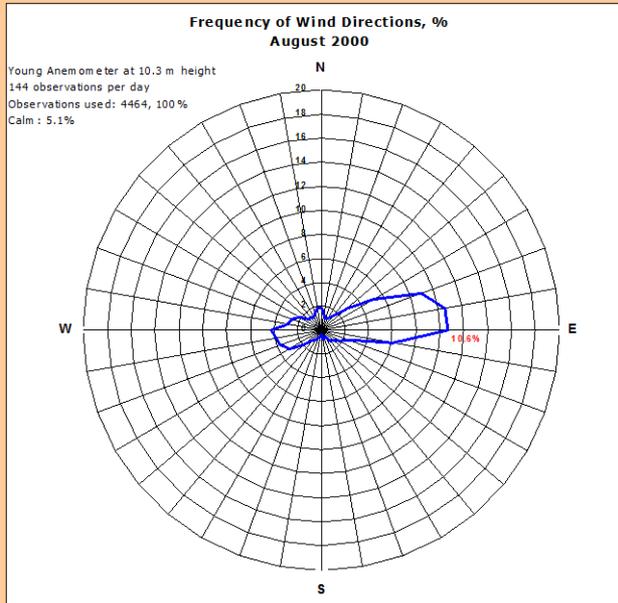

- *Easterly winds during days*
  - *Westerly winds during nights*
  - *Reversed winds at a higher level*
  - *How high is this circulation cell?*
- 
- *Air rises at the end of the Reyðarfjörður valley*
  - *Air descends over the sea*
  - *Does the air descend inside the fjord?*

# *Temperature inversions*

*can act as a lid for dispersion of polluted air*

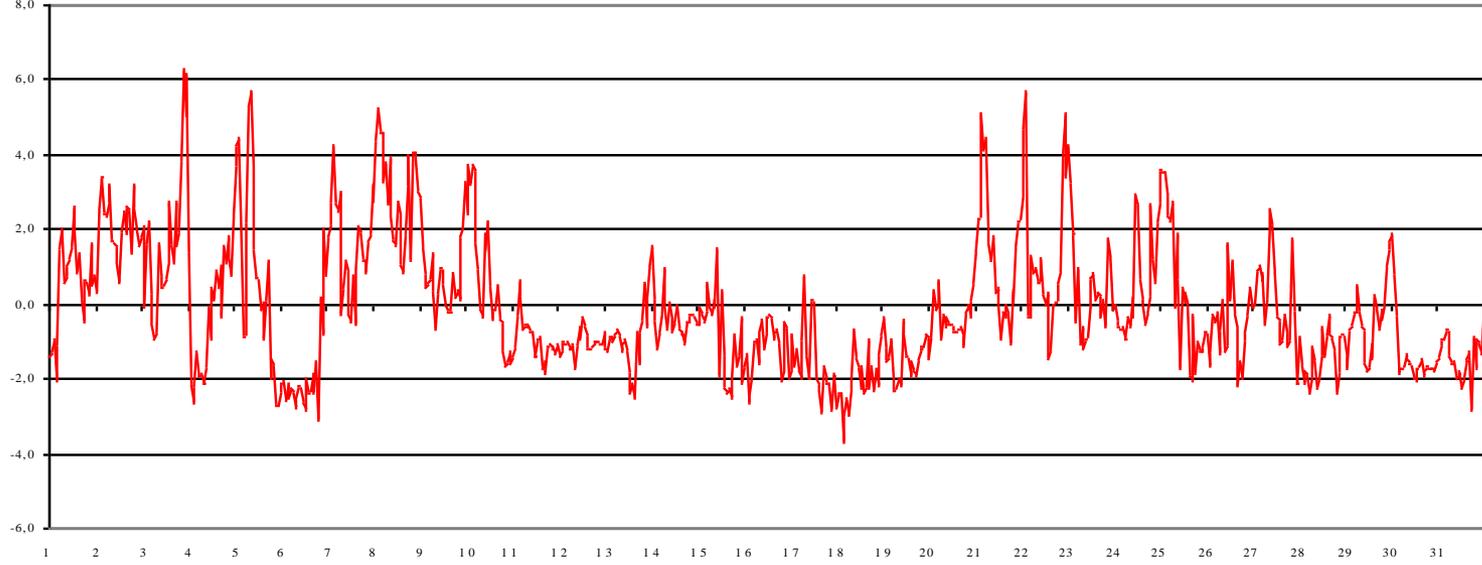

- *Normally air gets colder by about  $0.6^{\circ}\text{C}$  for every 100 m upward.*
- *For gradients  $>-0.5^{\circ}\text{C}/100\text{ m}$ , the air is stable and will tend to hinder vertical mixing.*
- *For gradient of  $<-1^{\circ}\text{C}/100\text{ m}$ , air is unstable and will aid vertical mixing.*
